Unsettled Topics on the Use of IVHM in the Active Control Loop Rhonda Walthall,2020-07-01 The growth in global economies has led to a world that has become much more mobile in the last few decades The number of enplanements has increased and is expected to continue to do so at an annual average rate of 1.8% through 2039 1 Prior to the COVID 19 pandemic the number of aircraft in service was expected to increase annually to meet the travel demand Next generation more complex aircraft were scheduled to replace the older aircraft at a pace that still allowed sufficient capacity to meet the increasing demand The events of 2020 have driven the industry to accelerate retirement of older aircraft while deferring the introduction of new aircraft While the length of the industry recovery period cannot be predicted most analysts believe that demand for travel will return once a vaccine is widely available The impact to the design of next generation aircraft will likely be shaped by technologies that are being accelerated for the post COVID world as well as for new mobility platforms Technologies such as artificial intelligence and fault tolerant and self adapting

control will use integrated vehicle health management IVHM capabilities as part of the decision making processes This SAE EDGE Research Report seeks to explore the unsettled issues surrounding embedding IVHM information into the active control loops of modern aircraft systems and in future generations of aircraft designs NOTE SAE EDGE Research Reports are intended to identify and illuminate key issues in emerging but still unsettled technologies of interest to the mobility industry The goal of SAE EDGE Research Reports is to stimulate discussion and work in the hope of promoting and speeding resolution of identified issues SAE EDGE Research Reports are not intended to resolve the challenges they identify or close any topic to further scrutiny Click here to access the full SAE EDGETM Research Report portfolio <https://doi.org/10.4271/EPR2020011>

Code/Space Rob Kitchin, Martin Dodge, 2014-01-10 An analysis of the ways that software creates new spatialities in everyday life from supermarket checkout lines to airline flight paths After little more than half a century since its initial development computer code is extensively and intimately woven into the fabric of our everyday lives From the digital alarm clock that wakes us to the air traffic control system that guides our plane in for a landing software is shaping our world it creates new ways of undertaking tasks speeds up and automates existing practices transforms social and economic relations and offers new forms of cultural activity personal empowerment and modes of play In Code Space Rob Kitchin and Martin Dodge examine software from a spatial perspective analyzing the dyadic relationship of software and space The production of space they argue is increasingly dependent on code and code is

written to produce space Examples of code space include airport check in areas networked offices and caf s that are transformed into workspaces by laptops and wireless access Kitchen and Dodge argue that software through its ability to do work in the world transduces space Then Kitchen and Dodge develop a set of conceptual tools for identifying and understanding the interrelationship of software space and everyday life and illustrate their arguments with rich empirical material And finally they issue a manifesto calling for critical scholarship into the production and workings of code rather than simply the technologies it enables a new kind of social science focused on explaining the social economic and spatial contours of software
